PHOENIX HOSTING SERVICE (PHS)

Phoenix Hosting Service (PHS) is an outsourced server service allowing centralising of Windows applications and data, saving management costs for your bank.

Lower cost application delivery of Windows products

- End-to-end system for access to Windows applications
- Lowering of maintenance charges for hardware and software and consequent lowering of management costs
- Longer life cycles for PCs
- Increased flexibility and access to resources, helping to support organisational needs

Data security and protection

- Control, protection and centralised management of data which reduces risk of loss or theft to a minimum
- Completely centralised data backup and restoring
- Management and control of security and user policies
- Constant updating of system for latest requirements for data processing and security

Disaster Recovery

- Guarantee of operational continuity
- Guarantee of data integrity and recovery in disaster scenarios

Licensing

- Centralised management of software licenses for infrastructure and applications

Quality

- Service certified in line with the UNI EN ISO 9001:2008 standard

DATA TRANSMISSION NETWORKS (RTD)

The outsourcing service for data transmission networks (RTD) allows network resources for the transmission of data to be centralised.

Reduction of complexity and management costs

- Implementation and management of a geographical network solution including links (TD lines) and devices (routers, switches) with a view to maximising efficiency of service and minimising problem points and management costs

Secure MPLS VPN technology

- Use of universally recognised security standards in order to implement a private network for the bank and ensure redundant-mode, secure management of access to services

Continuous monitoring of lines and devices

- The RTD service combines the most sophisticated technological applications with the skill and professionalism of our staff. The Phoenix help desk boasts instruments for continuous monitoring of the network and for the management of line or device malfunction

Disaster Recovery

- Guaranteed operational continuity

Market analysis and updating of solutions in the field

- Continuous analysis of technological developments in the telecommunications sector and the connectivity market in order ensure top-level network performance and the best service

Quality

- Service certified in line with the UNI EN ISO 9001:2008 standard
